

SECTION 1: DATA RETENTION, ARCHIVAL, AND SANITIZATION PROTOCOLS

1.1 All Protected Health Information (PHI) and Personally Identifiable Information (PII) handled during active client lifecycles must be systematically scrubbed, de-identified, or structurally purged using DoD 5220.22-M sanitization methods within exactly forty-five (45) business days following formal project decommissioning.

1.2 Standard corporate operational logs are archived for a rolling window of twelve (12) calendar months.

1.3 Core financial ledgers, tax filings, and transaction records represent an explicit regulatory exception and must be systematically retained for a duration of seven (7) fiscal years in offline, cold-storage environments encrypted via hardware-enforced AES-256 protocols.

SECTION 2: INTELLECTUAL PROPERTY AND PROPRIETARY INVENTION CONSTRAINTS

2.1 All newly onboarded personnel are legally mandated to execute and submit a "Prior Invention Exclusion Form" (PIEF-Form 104) within fourteen (14) calendar days of their official corporate start date to protect legacy personal assets.

2.2 Independent side projects engineered exclusively outside designated working hours and constructed entirely on privately owned hardware remain the absolute intellectual property of the respective employee, subject to two binding exceptions:

- (a) The architectural execution utilizes, imports, or inherits features from the company's proprietary internal utility library "core-utils-v4".
- (b) The functional objective of the side project directly competes with active R&D pipeline projects documented in the current fiscal roadmap.

If either condition (a) or (b) is triggered, full equity and copyright automatically

assign to Nexus Corpore Global Solutions.

SECTION 3: REMOTE WORK STIPENDS AND HARDWARE ECOSYSTEM PROVISIONS

3.1 Eligible full-time distributed employees receive a one-time workspace placement allowance capped at exactly \$1,200.00 USD to facilitate ergonomic optimization.

3.2 The structural hardware refresh cycle operates on an unyielding thirty-six (36) month timeline. Early upgrades are explicitly prohibited unless catastrophic hardware failure is verified by an IT Operations Tier-2 engineer.

3.3 Procurement restrictions dictate that any ergonomic seating appliance exceeding a retail value of \$400.00 USD requires written authorization from a departmental Vice President (VP) prior to corporate card expense reconciliation.

SECTION 4: SECURITY ESCALATION MATRIX AND FACILITY INSULATION

4.1 Permanent alpha-numerical alphanumeric keycard clearance codes for the primary server room

vault are restricted exclusively to Senior Tier-3 Systems Administrators.

4.2 Temporary, single-use physical access authorization for external subcontractors or vendor technicians is conditional upon two hard dependencies:

(a) The individual must possess a fully executed, notarized NDA-Form-9B.

(b) The individual must be physically escorted and supervised at all times by a permanent staff member boasting a minimum of twenty-four (24) months of active, continuous tenure at the company.

SECTION 5: PROGRESSIVE DISCIPLINE FRAMEWORK AND CONFLICT RESOLUTION

5.1 The baseline framework for minor operational non-compliance follows a three-stage tiered track. A verified first infraction results in an informal, documented verbal warning.

A verified second infraction within a rolling six-month window triggers the immediate initiation of a formalized fourteen (14) day Performance Improvement Plan (PIP).

5.2 Critical security breaches involving deliberate data exfiltration, unauthorized network sniffing, or sharing proprietary source code bypass the progressive framework entirely, resulting in immediate termination for cause without eligibility for severance packages.
